

We met in KSL on Tuesday, Sep. 8, 2026, at 4:45pm. All members were present.

We started by continuing our work on affinity clustering. We labeled the categories which we'd sorted the sticky notes into during our last meeting.

Andrew shared the Figma board with the instructional team.

Together, we finished sorting and labelling our categories. We looked over the board to check our organization, and then organized it. Aryan took a screenshot to submit with the assignment.

Martin consolidated our previously written bullet points for the Project Background into a coherent, synthesized paragraph.

Together, we began ideating two personas of individuals who could benefit from the kind of product we will be designing, based on our observations and interpretations from our interview notes.

At 5:45pm, we adjourned the meeting.
