We met in Glennan Lab on Friday, October 23, 2026, at 2:00 PM. Aryan and Martin were present at first while Andrew finished up starting a print at think[box] for the casing. Andrew came to Glennan around 2:20PM.

We received the vibration motor from Dr. Fu today and began testing it using the documentation and power source. Andrew soldered some breakout wires to the motor's leads for easier contact.

Martin and Aryan made changes to the ESP32 code to drive the motor and determine how to drive at the desired intensity with the board. They successfully made the motor vibrate when the volume passed an arbitrary threshold.

Martin and Andrew went to think[box] to collect the finished print. Martin began trimming the temporary supports from the casing.

Adjourned at 4:00PM.
