We met in Glennan lab on Monday, October 12, 2026, at 2:00 PM. All members were present.

We discussed the possibility of revising our prototype with Professor Fu, opening us up to the potential of revising our prototyping strategy for better-paced prototypes, rather than potentially making big leaps from one prototype to another.

Martin and Aryan continued to write Verification and Validation Protocols.

Adewola wrote out considerations for risks & safety, as well as contributing to both tracing matrices.

Andrew finished writing the verification strategy/justification and began developing verification testing protocols for each technical spec.

Adjourned at 3:00 PM.
