

## Sound-Sensor Glasses

Dislike - Epileptic - might result in strobing (as a result of the flashing and movement of light) that might affect to the user thus might not be practical

Like - Visual indicator, significance in direction

Others -

## Sound Origin Navigation and Indication Compass (SONIC)

Like - Two indicator for the sources of sound, secondary sounds, portability

Dislike - Would not want to easily forget/lose

Others - Formatted as a watch, or possibly accessories

## Tactile Detecting Headband

Dislike - Workplace consequently might prevent a headband/beanies from being used, buzzing might be disruptive to other users doing meetings

Like -

Others - other localized body areas

SHE LOVE THE DRAWINGS!!!

Can the ideas make sense in their real life?

---

Integrating concepts i.e. compass idea has vibrative response to louder sounds
