We met in Glennan lab on Monday, November 2, 2026, at 2:05 PM. All members present.

We worked on planning our verification and validation process/scheduling for the next week. Andrew started the 3D print for our final casing before the meeting; it will be done after we adjourn today.

Adewola proposed performing validation tests this Friday and next Monday & Wednesday. We also plan to perform verification measurements on Wednesday.

Martin worked on implementing a suggestion from Prof. Fu to change the direction of the lines on the screen to have a base at the arrows rather than at the origin, so the intensity lines are like tails to the arrows.

Aryan used a piece of fabric to make a wrist strap for the MVP.

We all worked on writing what tasks we each were/are responsible for post-midterm.

Adjourned at 2:55 PM.
