We met on the second floor of Nord on Friday, November 6, 2026, at 12:30 pm. Andrew, Aryan, and Martin were present.

We began validation testing for our device. We conducted tests with the first batch of participants, comprising 4 individuals.

Each participant was given a consent form to sign. Then they would put on a pair of noise-cancelling headphones. Each participant would identify which direction the sound was coming from using only the device. We logged how many times they got it right and then gave them a survey for information regarding their experience.

Wed discusses the results and decides what improvements we can make to the tests

Improvements:

- Recording of sound so that we have a standard for the noise
-

We moved our operations to the Glennan 3rd-floor Undergraduate lab at 2:00 pm.
