We met on Monday, October 5, 2026, at 11:30 PM in Kelvin Smith Library. Andrew and Aryan were present in person, and Adewola was present via Zoom. Martin is in class at this time but plans to arrive within approximately one hour.

We worked on finishing our prototype planning; each member present began working on the following sections.

- Aryan - Prototype Type #1
- Andrew - Prototype Type #2
- Adewola - Interface Definitions

After these sections were completed, we went back to revise our descriptions of each major subsystem of our design.

Around 12:30 PM, Martin arrived in person.

We worked on describing our functional and physical architecture blocks, according to the following split of duties:

- Andrew - functional block constraints/considerations
- Aryan - functional block I/O
- Adewola - functional block purposes
- Martin - physical architecture

All other parts of the document have now been completed by the individuals to whom they were assigned.

Aryan submitted the document and we adjourned at 1:10 PM.
